

Good morning everybody

I am going to speak about environment

Plastic is very useful for our live. It has some effects for our environment.

We all know that plastic waste take a long time to decompose. It can take up to a thousand years to decompose plastic in the landfills. Most of the plastic waste also ended up in the ocean. It is very dangerous for the ocean's ecosystem.

I want to see the healthy environment in my future. I don't want to see flood. We can apply 3 Rs, reduce , Reuse and Recycle. We can reduce plastics by using bag. We can Reuse plastics bottle for keeping things. We can recycle plastics by making handicrafts. We need to be more aware of the environment and be eco-friendly, or the future generation will be polluted.

Ladies and Gentlements

Throwing away trash into its rightful place is a good step. We need more actions. A big things start with little steps.

"Thank you".
